

Objective: Design and launch a bottle rocket propelled by water to reach longer distances.

Rules:

1. **Team Size:** Maximum 3 members. Each student has to register compulsorily.
2. **Materials:** Use half litre or one litre or 2-litre plastic bottles to make the rocket.
3. **Flight Testing:** Each team gets **2 attempts**; the best attempt is considered. The students are allowed to fill water and pressurize the bottle themselves. Water, launch pad and compressor will be provided. One of the team members must hold the bottle and the other team member can pressurize the bottle using the compressor provided.
4. **Performance Measurement:** Straight distance from the launching pad.
5. **Safety:** Avoid using sharp edges or metal parts to build the rocket.
6. **Judging Criteria:** Winners are based on the longest distance covered by the bottle before it touches the ground.

Decisions made by the event judges are final.
